

Grohsafe® new

Introducing the Pressure Balance Rough-In Valve with Built-In Diverter – Model 35 016 000

The new Grohsafe® Pressure Balance Rough-In Valve with Built-In Diverter can be installed with a choice of five different shower trims to perfectly match GROHE bathroom faucets.

Plus, the built-in diverter eliminates the need for a diverter tub spout or a separate diverter valve which can save money and simplify installation.

The Grohsafe® Pressure Balance Rough-In Valve with Built-In Diverter brings peace of mind with long term, reliable shower protection from scalding and cold shocks. This Grohsafe valve features a rotating handle control which allows the user a wide comfort zone so they can gradually and precisely regulate water temperature from cold to hot. In addition, a handle limit stop controls temperature even further by limiting the extent of handle movement toward the full hot position.

Performance Features:

- Integrated spring loaded diverter – resets to tub outlet after each use
- 5 valve trims available in decorative finishes to complete the design families
- Built-In Service Stops
- Check Valves
- 1/2" Universal Connections
- Compensates for hot or cold water pressure fluctuations and maintains selected shower temperature – no matter how the water pressure is effected
- Protects against scalding if the cold water supply is cut off by automatically shutting off the flow of hot water
- Protects against cold water shock if the hot water supply is cut off by automatically shutting off the flow of cold water
- Allows back to back installation, eliminating expensive piping
